

ABSTRACT OF THE DISCLOSURE

The invention relates to self-adhesive addition-crosslinking silicone compositions which comprises

- 5 (A)diorganopolysiloxanes, (B) organohydrogenpolysiloxanes containing less than 20 SiH bonded hydrogen atoms and less than 12% aryl groups, (C) organosilicon compounds having epoxy groups and hydrolyzable groups and (D)a hydrosilylation catalyst. The compositions are transparent to translucent, exhibit good compositional compatability, and cure to form strongly adhesive elastomers with good physical properties.
